

Circuiti stampati, professionali e civili

### **DECLARATION**

Object: ***EC REGULATION 1907/2006 – REACH***

Dear Customer,

Our company produces mono-bi-multi layer printed circuits, and the chemicals used to create the finished product are purchased exclusively from suppliers based in Italy or within the European Community. (The circuits are considered goods according to article 3 of the Regulation).

C.T.B. does not produce any chemicals or import any from non-European countries.

For this reason, C.T.B., being regarded as a downstream user, is not required to perform pre-registration as required by Article 28 of (EC) Regulation no. 1907/2006.

The printed circuit boards of C.T.B. do not release any hazardous substances under conditions of normal use, and in any case are not made with SVHC substances or others in the "candidate list" published on 29 October 2008 and currently referred to as SVHCs (Substances of Very High Concern) by ECHA.

Our customers do not, therefore, have to meet any obligation under the REACH Regulation.

Yours sincerely,

CTB SNC
